

THE LIVING DOOR

speech password. The door would listen to you, and then open itself for you (if you know the password)

- **Motion Detector** – For 24x7 door monitoring, our sensor would detect any kind of motion outside and will capture it. At the end of the day you would get an email and you could easily monitor all activities, just like that :)
- **Mail-bot** – Prefer email? You can communicate completely with our unit through email. You may ask the status of the door, you may ask for the last N activity logs, you may even close/open the door, you may grant permission to someone and you may also get all photo of activities through mail.
- **Speech-Communication** – You can talk to the person who is in-front of your door, using your phone application.

> I am hotel/company and want to use your 'living door'?

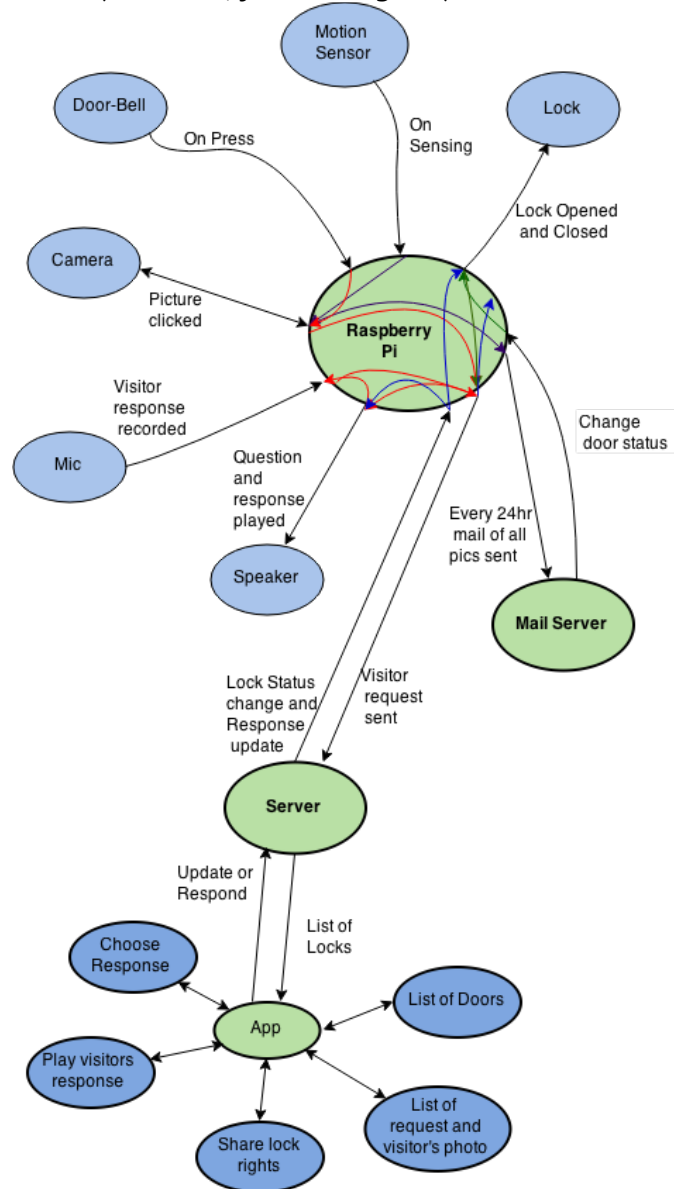

Alright mate, just drop us a mail. And let's talk and negotiate and talk.
(We have some secret benefits for you guys)

>I want to speak to the manager

Yeah, sure. He is lonely and would love to get in touch.

email : the.living.door.IIT.Mandi@gmail.com
mob : +91-8628890396

> I want to look inside?
Here (We know, you won't get it)

And yes – 10% DISCOUNT to you. Just for you,
You can check other brochures, no kidding.

THE LIVING DOOR

- ✓ Grant permission to room-mates / colleagues

THE LIVING DOOR

>How to install?

Just gives us a call. We would be ready with our unit. We would be-

- Replacing your lock with our more powerful one.
- Installing our unit on the door.
- Connecting our unit with your speaker (or ours, if you say so)
- Registering you at our server, so you would be good to go.

What does you have to do? Just sit tight. Let us install app on your phone. And go, you are good to go.

>What all is included in the so called 'the unit'?

Actually it is up to you. The basic version of 'the unit' includes the raspberry pi (<3) and a camera. Our unit could be quite possibly working with your existing lock. In that case, don't be a fool and buy the additional lock which we provide. So, other than the basic, these all are the add-ons:

- *A better camera* (with night vision and better resolution)
- Speaker (you could use yours too, or still you could use ours to play whatever crap you listen to)
- **Motion sensor** (recommended (only if you loves a secure home))
- Microphone
- Additional primary, secondary and even tertiary lock.

THE LIVING DOOR

> So costly it must be?

Hell, no. Then again if you want to live in future or even if you are from future, you sure would have to pay few bucks more.

Here's the cost breakdown-

- THE BASIC UNIT – Rs 5799*
- The better camera – Rs 499* (You have to return the one from basic though!)
- The Microphone – It's on us. Yes, it's free.
- The motion sensor – Rs 399*
- The lock –
 - Lock Supremacy – Rs 599*
 - Lock Ultimatum – Rs 799*
 - Lock Legacy – Rs 999*
- The mail-bot service – Rs 249*
- The speech password service – Rs 249*

* Just messing with you – No hidden costs

> You named few services above, what in the name of God are those?

You look like the jumpy one out of your room-mates. Hold your horses. You would be loving it.

> So how to use it?

Once we have installed the unit, you could open any of your door (didn't we mentioned that you could have any number of door registered) from the phone app.

Someone's at the door, you would get a notification with his/her *picture and sound*(if

THE LIVING DOOR

he/she chooses to record).

If he/she is friendly enough to be let in, just swipe right to accept. And swipe left to reject. You could very well ignore someone (like you always do your girlfriend).

You could send custom saved sound templates and so can communicate with the person at your door and him politely (or not) to come later if you want so.

> But I have room-mates and we all want to access same door?

Sure, go ahead. You can pass on/grant permission to them. And just like you they would be able to open/close the door. You could also give time based access to people.

> What if I am in a meeting and couldn't respond to the notification?

If you are in a meeting, just don't respond. The door would say sorry on behalf of you and ask the person to come back later. Or if you have multiple room mates, maybe some one else can buzz him in. Or, maybe if you have told someone the voice password, he/she could use that to enter.

> So, what are these add-on features?

Okay, we have these features in store for you-

- **Speech Password** – For a keyless and phone less entry, you may even set a
